

ABSTRACT

A display method can achieve both of substantially high definition image display and high speed dynamic image display. The image displaying method of an image displaying apparatus having a display portion consisted of a plurality of pixels takes each of a predetermined number of pixels as one block unit and forms one screen image for displaying by combining a region for displaying the same information on a plurality of pixels in the one block unit during one scanning period and a region for permitting display of respectively different information on the plurality of pixels in the one block unit.
